

Consider total cost of ownership over time for your entire system.

Lower volumes + batch calibration = real savings across large fleets.

Lower Calibration Volume

Mini calibration cup integrated in the instrument.

Batch Calibration Assistant

Calibrate up to 6 sensors of the same type at once.

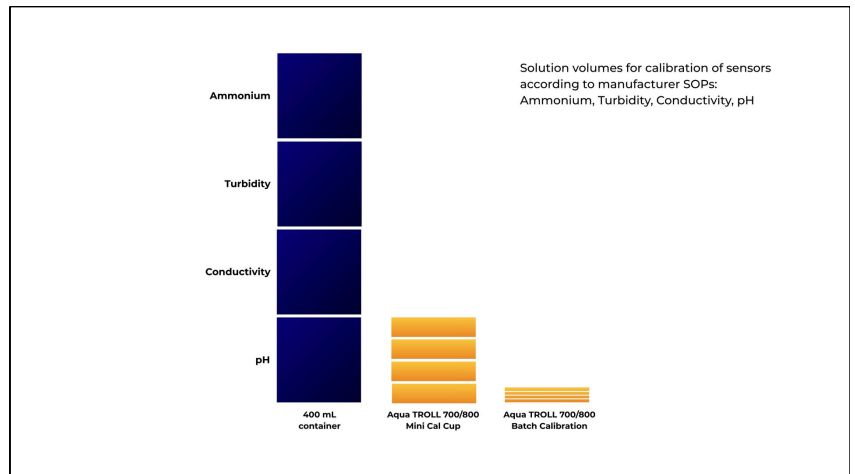

Fast, Easy Calibration

Saves time and ensures consistent results.

Minimize the Cost of Consumables

Savings on calibration solutions increase significantly as fleets grow. The graph shows the calibration volumes of multiparameter sondes deployed as part of a CSO monitoring network.

Calibration efficiencies also reduce carbon emissions.

Even Greater Savings with Batch Calibration

VuSitu batch calibration assistant: The app detects multiple sensors of the same type installed in an instrument and guides the user through the calibration.
